Database Performance Monitoring

We provide complete visibility into database performance for the entire engineering team at any scale without adding overhead to databases.

Understand Code Deployment Impacts

With VividCortex, you can quickly identify query behavior and monitor performance after code deployment.

1. Start on the Profiler page to see the behavior of individual queries.
2. UI shows the deploy marker as a vertical line, correlated with any query behavior change.
3. Drilling into a specific query, you can inspect its characteristics and execution plan.
4. You can also look at additional details regarding new query performance (below left).

See how VividCortex can help you understand code deploy impacts.
