Increase reliability, scalability, and security with our tested and hardened set of PostgreSQL tools that deliver the enterprise capabilities your business-critical applications require.

Easily scale horizontally or vertically to support high volumes of concurrent users and terabytes of data

Minimize the impact of data issues, corruption, or database outages

Prevent excessive locking during routine maintenance

Increase data security and compliance with a robust access control system, backup encryption, and auditing capabilities

Rebuild tables online to reclaim free space and enhance query performance

Reduce overhead during query and maintenance activities

Improve database performance with indexing system and partitioning enhancements

Support for special data types, contributor extensions, a robust procedural language, and special functions

The extensible database approach makes it easy to customize the database to meet your specific application needs
